of color terms on color perception and cognition and how to interpret the effects. The study of categorical effects in color perception has its roots in two historical traditions. One is a concept that originated in anthropology, called the Sapir-Whorf Hypothesis (2). Whorf and Sapir formulated this hypothesis in different

### **Effect of Color Terms on Color Perception**

What is "Color"? Color is a fundamental attribute of human visual perception. By fundamental we mean that it is so unique that its meaning cannot be fully appreciated without direct experience.

### **Color - USD**

Color theory analyzes only the relationships of pure colors, it does not take color lightness and saturation into account. While your color scheme can use any tints, shades, and tones, color theory pays attention only to the hue component.

### **The color wheel is a visual representation of color theory**

In another aspect of human vision known as color invariance, the color or gray value of an object does not appear to change over a wide range of luminance. In 1672, Sir Isaac Newton demonstrated color invariance in human visual sensation and provided clues for the classical theory of color perception and the nervous system.
