Pruritus (itchy skin) is the single most common symptom of many inflammatory skin conditions (see section 06 for Pruritus). Dry skin itself is itchy and requires management with emollient therapies. While itching is distressing to the patient, it may not help you reach a diagnosis. Excoriation (scratch marks) on the skin provide evidence of pruritus.

### **Your Dermatology Pocket Guide: Common skin conditions**

Common growths on the skin that appear when the skin cells bunch up with tissue surrounding them. Most people have moles and may develop new ones from time to time.

Acne, the most common skin disorder in the U.S., can be a concern for every teen, and the incidence of acne is also growing in adults. Acne is caused by blocked hair follicles and oil (sebaceous) glands of the skin, often triggered by hormonal changes. The term acne refers to not only pimples on the face, but blackheads, cysts, and nodules as well.
