Pavement Design & Information - Minnesota Department of

Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement. It is distinguished from other, non-cementitious types of concrete ...

Note: Effective June 26, 2006, the Flexible Pavement Rehabilitation Manual (FPRM) has been discontinued and can no longer be used for designing pavement structures on California state pavements. Information related to flexible pavement rehabilitation design is found in the California Highway Design Manual, Chapter 630, Topic 635, and California Test Method 356.

Division of Maintenance - Pavement

A road surface or pavement is the durable surface material laid down on an area intended to sustain vehicular or foot traffic, such as a road or walkway. In the past, gravel road surfaces, cobblestone and granite setts were extensively used, but these surfaces have mostly been replaced by asphalt or concrete laid on a compacted base course. Road surfaces are frequently marked to guide traffic.

The purpose of this study is to experimentally correlate the compressive strength (f_c) of concrete to the modulus of rupture (f_r) for plain concrete beams with a vertical construction joint placed at their center. The ACI code provides a formula for the correlation of f_r to f_c , but with the provision that the concrete specimen is monolithic (no joints).

Overview. The Los Angeles (L.A.) abrasion test (Figure 1) is a common test method used to indicate aggregate toughness and abrasion characteristics. Aggregate abrasion characteristics are important because the constituent aggregate in HMA must resist crushing, degradation and disintegration in order to produce a high quality HMA.. Figure 1: L.A. abrasion testing equipment.
