In the theory of computation, a branch of theoretical computer science, a pushdown automaton (PDA) is a type of automaton that employs a stack.. Pushdown automata are used in theories about what can be computed by machines. They are more capable than finite-state machines but less capable than Turing machines. Deterministic pushdown automata can recognize all deterministic context-free ...

In automata theory, a finite state machine is called a deterministic finite automaton (DFA), if . each of its transitions is uniquely determined by its source state and input symbol, and; reading an input symbol is required for each state transition. A nondeterministic finite automaton (NFA), or nondeterministic finite state machine, does not need to obey these restrictions.
