

fundamental proof methods in pdf

Under review as a conference paper at ICLR 2017 If $P_r(x) > P_g(x)$, then x is a point with higher probability of coming from the data than being a generated sample. This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of P

ABSTRACT arXiv:1701.04862v1 [stat.ML] 17 Jan 2017

In computer vision, the fundamental matrix is a 3×3 matrix which relates corresponding points in stereo images. In epipolar geometry, with homogeneous image coordinates, x and x^2 , of corresponding points in a stereo image pair, Fx describes a line (an epipolar line) on which the corresponding point x^2 on the other image must lie. That means, for all pairs of corresponding points holds

CHAPTER 1. DEFINITIONS AND FUNDAMENTAL CONCEPTS 3
v1 and v2 are adjacent. The degree of v1 is 1 so it is a pendant vertex. e1 is a pendant edge. The degree of v5 is 5. The degree of v4 is 2. The degree of v3 is 0 so it is an isolated vertex. In the future, we will label graphs with letters, for example:
