

geographic information systems an pdf

The County of San Bernardino's Geographic Information Management Systems (GIMS) group has the responsibility to acquire imagery of its populated areas and landscapes in various formats and types, create the highest level of geospatial data possible, establish technical infrastructure, and develop public relations with county departments, local, state and federal governments and other agencies.

Geographic Information Systems (GIS) > Home

A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data. GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations.
