This is a very good book. I have used it to study the biochemistry of the metabolism over any other thing. The boxes... I think that have so many those and by this, may be is a little hard to put any in the rigth context - like a content table, but I donâ€™t know if put these informations in the context or, for each part do a new topic for example will help.

Inclusion-cell (I-cell) disease, also referred to as mucopolipidosis II (ML II), is part of the lysosomal storage disease family and results from a defective phosphotransferase (an enzyme of the Golgi apparatus). This enzyme transfers phosphate to mannose residues on specific proteins. Mannose 6 phosphate serves as a marker for them to be targeted to lysosomes within the cell.

The nucleolus (/ njuːˈkliː.əl /, plural: nucleoli /-l əˈleɪ /) is the largest structure in the nucleus of eukaryotic cells. It is best known as the site of ribosome biogenesis. Nucleoli also participate in the formation of signal recognition particles and play a role in the cell's response to stress. Nucleoli are made of proteins, DNA and RNA and form around ...

â†‘ Back to the top â†‘ Catalytic mechanism of phosphopentose epimerase. Also this reaction, like those catalyzed by 6-phosphogluconate dehydrogenase and ribose 5-phosphate isomerase, proceeds through the formation of an enediol intermediate, but with the double bond between C-2 and C-3 and not between C-1 and C-2. During the reaction an amino acid residue present in the active site of the ...
