Units of measurement. Both gas and liquid flow can be measured in volumetric or mass flow rates, such as liters per second or kilograms per second, respectively. These measurements are related by the material's density. The density of a liquid is almost independent of conditions.

Capital Cost (CAPEX) Comparisons. High pressure (or dense phase) is increasingly used for transporting large volumes of carbon dioxide (CO<sub>2</sub>) and natural gas over long distances. In this month's "Tip of the Month (TOTM)", we continue to explore key aspects of dense phase transportation in pipelines.

Pressure measurement is the analysis of an applied force by a fluid (liquid or gas) on a surface. Pressure is typically measured in units of force per unit of surface area. Many techniques have been developed for the measurement of pressure and vacuum. Instruments used to measure and display pressure in an integral unit are called pressure gauges or vacuum gauges.

The WIKA industrial pressure gauge has copper alloy wetted parts, which resist corrosion against salty liquids, and a circular dial that is enclosed in a stainless steel case that resists corrosion against most samples.

Specific investigations of the impacts of impingement and entrainment have been conducted for SWRO facilities , , . Some regulatory jurisdictions (e.g., in the State of California) use the conservative assumptions that the loss of ichthyoplankton (eggs and larvae) caused by impingement and entrainment significantly impacts local and regional fisheries.
