The concept of spin and the interaction of spins with external magnetic field and other spins. Discussions on spectral features such as, chemical shift, multiplet structures (J coupling), and lineshapes. Classical Description: Vector description to introduce the concept of free induction decay.

### **NMR Spectroscopy: Principles and Applications**

Data Sampling and Digitization. The resulting photocurrent at the anode is proportional to the number of photons striking the cathode.  $\propto$  The proportionality constant (or gain factor) results from the number of dynodes and from the variable high voltage applied between the anode and the photo-cathode (e.g. 100-1000V).
