The speed of light in vacuum, commonly denoted c , is a universal physical constant important in many areas of physics. Its exact value is 299,792,458 metres per second (approximately 300,000 km/s (186,000 mi/s)). It is exact because by international agreement a metre is defined to be the length of the path travelled by light in vacuum during a time interval of $1/299792458$ second.

When the California "high speed" rail was approved, I was quite disappointed, as I know many others were too. How could it be that the home of Silicon Valley and JPL "doing incredible things like indexing all the world's knowledge and putting rovers on Mars" would build a bullet train that is both one of the most expensive per mile and one of the slowest in the world?
