The study of oxidation-reduction processes in soils began in the 1900s (Gillespie, 1920) and has since been applied to biological, limnological, and geochemical systems (Bass Becking, 1960).

cover material. Field and laboratory studies which determine oxidation of CH<sub>4</sub> only through uniform and homogeneous soil layers may lead to over-estimations of oxidation in landfill cover soils [9]. It is important to note that percentage oxidation is a function of source strength of CH<sub>4</sub>, or the flux rate at the V1-269

Often, soil CH<sub>4</sub> oxidation at near-atmospheric CH<sub>4</sub> concentrations follows first-order reaction kinetics (3, 39, 46), as was the case in the birch taiga soil in this study (Fig. 1a). In one-textured soils, first-order kinetics at lower CH<sub>4</sub> concentrations may result from restricted gas diffusion from the atmosphere
